

OCS contrib. to PFIAB

1966

Scientific Computer operations.

Improved capabilities to handle scientific problems were developed by OCS in several important areas: during 1966: trajectory and orbital analysis; -developed a program to

Cartography - completed the initial phase of the construction and implementation of an automatic, world-wide map projection and plotting system.

Size and scope of data bases/and improvements in retrieval and analysis programs were made during 1966 under Intel Info Processing

Significant advances were made in collection target management, Soviet test range activity analysis and production, and automatic map making. Preliminary analysis was made for developing an integrated, on-line Management Information System for the Agency.

Transition to 3rd generation systems of computer hardware/software ~~xxxx~~ was initiated during 1966; and a multi-tasking utility system was developed in-house and implemented.
